Graphical Evidence: Vaccination Did Not Save Populations - Data From Australia

Posted by [vaccinesme](#) on Monday, January, 26 2009 and filed under [Articles](#)

Key topics: [Mortality Decline](#) • [Mortality Rates](#)

The graphs below are based on the official death numbers as recorded in the Official Year Books of the Commonwealth of Australia, and are taken from Greg Beattie's book "Vaccination A Parent's Dilemma". These graphs depict the mortality decline from "infectious disease" in Australia.

The graphs prove that vaccination did not eradicate such diseases, but that the diseases had almost disappeared before widespread vaccination (and in some cases in the absence of vaccination) due to social reforms.

Graphical evidence showing mortality decline from diseases for USA, England, New Zealand and other countries show the same patterns.
